DETAILED ACTION

Allowable Subject Matter

1. Claims 1-5 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 1-5 are allowed since certain key features of the claimed invention are not taught or fairly suggested by prior art. **In claim 1**, “an inverter generating a first luminance control signal having an analog value depending on luminance distribution of the image data and a second luminance signal having a pulse duty ratio determined by multiples of a frame frequency, synthesizing the first luminance control signal and the second luminance control signal, and generating a lamp driving signal based on the synthesized signal; and a lamp having on and off states and intensity controlled in response to the driving signal from the inverter”. “The closest prior art Park (2002/0130830 A1) teaches a backlight driver outputs a high-potential backlight driving voltage to the backlight unit when a luminance control signal of high luminance level driving is provided by the timing controller, and outputs a constant level luminance signal when a constant luminance signal is input ... outputting a high or a low voltage to the inverter according to whether the image signals require high or low luminance level driving so as to increase or decrease luminance levels of the LCD panel, however, singularly or in combination with other prior art, fail to anticipate or render the above underlined limitations obvious.

Art Unit: 2629

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Terasaki (5,844,540) teaches a backlight control with PWM dimmer driving circuit for applying PMW dimming to a fluorescent tube, by controlling an inverter unit

Weindorf (6,690,121) teaches a lamp brightness control for a lamp provides backlight illumination for display.

Woo (6,961,044 B2) teaches reducing power consumption of a LCD backlight lamp.
